

[Machine Type And Serial Number Are Invalid Lenovo Tablet!](#)

Note: For a device not supported by diagnostic codes in the ThinkPad tablet computers, see the manual for that device.

Numeric error codes

Table 1. Numeric error codes

Symptom or error	FRU or action, in sequence
0183 Bad CRC of Security Settings in EFI Variable. Enter ThinkPad Tablet Setup.	Checksum of the Security settings in the EFI Variable is not correct. Enter ThinkPad Tablet Setup to check Security settings, and restart the system. If you still have a problem, have the tablet serviced.
0187 EAIA data access error.	The access to EEPROM is failed. Have the tablet serviced.
0188 Invalid RFID Serialization Information Area.	The EEPROM checksum is not correct (block # 0 and 1). The system board should be replaced, and the box serial number needs to be reinstalled. Have the tablet serviced.
0189 Invalid RFID configuration information area.	The EEPROM checksum is not correct (block # 4 and 5). The system board should be replaced, and the UUID needs to be reinstalled. Have the tablet serviced.
0190 Critical low-battery error.	The tablet turned off, because the battery is low. Connect the ac adapter to the tablet and charge the battery.
0199 System Security - Security password retry count exceeded.	This message is displayed if you enter a wrong supervisor password more than three times. Confirm the supervisor password and try again. To clear the error, enter the ThinkPad Tablet Setup.
2200 Machine Type and Serial Number are invalid.	Machine Type and Serial Number are invalid. Have the tablet serviced.
2201 Machine UUID is invalid.	Machine UUID is invalid. Have the tablet serviced.
2300 Built-in Battery is broken.	Replace the built-in battery.
2301 Built-in Battery needs to recharge.	Recharge the built-in battery.
2302 Built-in Battery is not detected.	Attach or replace the built-in battery.

Intermittent problems

Intermittent system hang problems can be due to a variety of causes that have nothing to do with a hardware defect, such as cosmic radiation, electrostatic discharge, or software errors. FRU replacement should be considered only when a problem recurs.

When analyzing an intermittent problem, do the following:

1. Run the diagnostic test for the system board in loop mode **at least 10 times**.
2. If no error is detected, do **not** replace any FRUs.
3. If any error is detected, replace the FRU shown by the FRU code. Rerun the test to verify that no more errors exist.
